

Worldwide repairs carried out with PolymerMetal®

REP-#140

In a steel plant the repair of a broken spool reducer with a weight of 40 t would have taken up 10 days by using the conventional way of welding. By using the repair technology of MultiMetall combined with the PolymerMetal MM-metal SS-steel and MM-Release agent a repair time of just 27 hours was necessary. At the spool reducer a stress of 120 MPa occurs.
